News Conference

Room W2-63

Tuesday, March 6, 2001

8:45 – 9:15 am

‘New features in Virtual Engines: The New Benchmark in Engine Simulation Software’

Virtual 4-Stroke and Virtual 2-Stroke are advanced CAE tools for engine design and analysis on any Windows PC. Powerful and easy-to-use graphical interfaces allow for rapid parametric design and assessment for performance, emissions and noise. Version 4.0 includes new turbocharger, supercharger and catalyst modeling capabilities. External interfaces to STAR-NT, FLUENT and ADAMS Engine are also available.

Please join us for an overview of the Virtual Engines suite on **Tuesday, March 6th at 8:45 – 9:15 AM in Room W2-63.**

Stop by our booth #3377 for additional demos and information on Engine Simulations, Combustion Analysis and Engine Management Systems products.
